

Choosing the Best Internet Service

Businesses are increasingly reliant on fast, reliable Internet connections. Many are discovering that consumer grade Internet connections which worked well in the past are simply inadequate for today's applications. Described below are several important considerations when selecting a better Internet provider:

Dedicated vs. Shared Connections

Dedicated Internet connections through a private network ensure that users don't have to share bandwidth with their neighbors and always have the access they need. A dedicated connection is more important than a higher but shared connection.

Guaranteed vs. Burstable Speed

A guaranteed speed produces predictable and consistent

connections. By contrast, "burstable" connections only temporarily operate at high speeds depending upon the number of users accessing the service at a given moment.

Symmetrical vs. Asymmetrical

Symmetrical bandwidth, offering equal upload and download speeds, is essential for modern business applications such as Cloud computing and network communications.

Asymmetrical connections, where uploading is much slower than downloading, are inadequate in a business setting.

One-Vendor vs. Multi-Vendor

Buying VOIP phone, Cloud, and Internet services from one vendor ensures the smooth integration of these services into a seamless

network, avoiding compatibility issues and reducing costs through bundle pricing.

Price

Technological advances have significantly lowered Internet service prices. For example, companies that are paying \$400/month for a single T1 can buy the next generation equivalent, EFM 10M/10M, at a significantly lower price.

The Servpac Difference

Based on dedicated connections, guaranteed speed, symmetrical design, one-vendor solutions, and better pricing, Servpac offers the best business Internet service in Hawaii! Please call us today for more information. **808-237-5000**

THE SERVPAC SOLUTION

PHONE

Superior VOIP phone technology

INTERNET

Faster, more reliable Internet connections

CLOUD

Local, secure Cloud Computing

ABOUT SERVPAC INC Servpac is a privately held, Hawaii-based telecommunications company providing innovative telephone, Internet, and Cloud solutions for small to medium-sized businesses since 2004. As the largest locally based CLEC in Hawaii, Servpac specializes in the integration of phones, Internet, and Cloud services into a seamless integrated platform, enabling its customers to compete more cost effectively in the global marketplace. For details, call **808.237.5000** or visit **SERVPAC.COM**.

Empowering Hawaii's businesses with superior phone, Internet, and Cloud technologies.
